

## The issue

Even before the pandemic, remote work has always had difficulties adapting to the modern collaboration and teamwork oriented workflow. Emails are often too slow and numerous to be an effective solution. Many solutions to this issue have been created but are often complicated, expensive, and laden with security risks.

## Gyroscopic Retrospective

Gyroscopic Retrospective is a collaboration tool designed to help conduct sprint retrospectives remotely. It simplifies the collection of feedback from team members and facilitates real-time collaboration and communication with simple features such as like and dislike buttons to complex functionality like having pre-created teams allowing for automatic sharing with relevant members. Its simplicity allows users to intuitively collaborate with their peers, while hosting key features such as automated password recovery and email invitations. Best of all, it's open source. The code is available right here, public on Github.

Strike the perfect balance between simplicity while maintaining security.  
Start collaborating remotely without barriers today with Gyroscopic Retrospective!
